INTRODUCTION

This Blue Cross Blue Shield of Wyoming (BCBSWY) Preferred Drug List, also called a patient medication guide, includes Brand drugs and Generic drugs. This guide, current at time of printing and subject to change, is updated quarterly. Members and physicians can review the most up-to-date version of the Preferred Drug List at www.wyomingblue.com/pharmacy.

The Preferred Drug List includes a list of prescription drugs, insulin, and diabetic supplies that reflect the current recommendations of BCBSWY. The Preferred Drug List is developed in conjunction with Prime Therapeutics' National Pharmacy & Therapeutics Committee, which includes practicing physicians and pharmacists dedicated to providing patients with high-quality, cost-effective drug therapy. The Committee includes physicians and pharmacists from throughout the country. Prime Therapeutics does not have voting privileges. Drugs are reviewed in terms of safety, efficacy, and clinical uniqueness.

MEMBER PRESCRIPTION BENEFIT

Medications and supplies on this list are Preferred products. Drugs or supplies not listed are Non-Preferred (NP). Coverage of Preferred and Non-Preferred drugs will vary depending on your individual prescription benefit.

Some drugs may be excluded from coverage. For example, drugs indicated for cosmetic purposes, e.g., Propecia, for hair growth, are not covered. Prescription drugs may be excluded from coverage if there are over-the-counter (OTC) versions marketed. OTC drugs are not covered with the exception of insulin and selected diabetic supplies.

PRIOR AUTHORIZATION

The following drugs, including generic versions if available, are subject to **PA**. This list is subject to change.

Drugs are selected for prior authorization (**PA**) because of actual or potential misuse or overuse that may be of clinical and/or economic concern. Drugs selected for **PA** require that specific clinical criteria are met before the drugs will be covered under a member's prescription benefit. The following drugs, including generic versions if available, are subject to **PA**.

Not all drugs on the following list are on the Preferred Drug List. Coverage of Preferred and Non-Preferred drugs will vary depending on your individual prescription benefit. This list is subject to change. For information about benefit coverage on specific drugs, please call **800.442.2376**.

HOW TO USE THIS LIST

This list is organized into broad therapeutic categories. For example, Hormones, Diabetes and Related Drugs is a broad category. Within most categories, drugs are sub-grouped based upon drug class, for example under Hormones, Diabetes and Related Drugs you will find Corticosteroids. All drugs listed, whether generic or brand, are Preferred drugs.

CORTISONE		

1 The first column of the chart lists the drug name. Generic drugs are shown in lower-case **boldface** type.

Example: **budesonide ext-release**

Preferred brand drugs are listed in all CAPITAL letters.

Example: ZYTIGA

The following examples are given to assist you and your doctor in reading listings that include specific strengths and dosage forms. These examples can be applied to other drugs on the Preferred Drug List. Any exceptions are noted and some listings contain additional information about specific products or dosage forms.

- **Extended-release and delayed-release products require their own entry.**

Example: DETROL LA

The long-acting product Detrol LA is on the Preferred Drug List, but requires a separate entry from the non ext-release product Detrol.

- **Some products may show a strength, if so only that strength indicated is on the Preferred Drug List.**

Example: XIFAXAN 550 mg

The Xifaxan 550 mg is on preferred drug list in this case, but the Xifaxan 200 mg is not because it is not listed.

2 The columns indicate the Utilization Management (UM) program(s) that apply to the prescription drug (e.g., Prior Authorization and Quantity Limits). If an indicator is present in the column(s), then the UM program noted is possibly applied to your benefit. Some plans may have UM on additional medications beyond those noted in this document.

GENERIC SUBSTITUTION

BCBSWY encourages generic utilization as a way to provide high-quality drugs at a reduced cost. Generic drugs are as safe and effective as their brand-name counterparts, but are usually less expensive. Generic drugs are manufactured under the same strict standards of FDA's Good Manufacturing Practice regulations that are required for brand products including batch requirements for identity, strength, purity, and quality.

An FDA-approved generic drug may be substituted for the brand counterpart because it:

- Contains the same active ingredient(s) as the brand drug
- Is identical in strength, dosage form, and route of administration
- Is therapeutically equivalent and can be expected to have the same clinical effect and safety profile

To encourage the use of generic drugs, Preferred brand drugs usually become Non-Preferred after the generic equivalent version is added to the drug guide. If the brand drug you are looking for does not appear on this list, it may be present under the generic name. You can ask your pharmacist for assistance.
